Where we are: the current Stoma landscape

- Significant rise in primary care spend in last 5 years but only 10% patient increase
- Spent annually on stoma care, without consistency and clarity to achieve best value
- Inappropriate use of products can increase annual patient cost from £700-£2300 to over £6k

What we can achieve: Recommendations can deliver

- Multi-million-pound savings by reducing waste and achieving value-based care
- 'Once for Scotland' shared independent data that supports GPs, nurses and prescribers
- Improved outcomes & self management that gives patients a better quality of life
